<https://jerryv45.github.io/JV-portfolio/>

Personal Summary

A problem solver that always tries to take the most logical approach to challenges. Excellent troubleshooting skills, self-motivated, well-organized, able to work well with minimal supervision, able to meet deadlines and work on multiple projects simultaneously, skilled at communicating and great with interpersonal skills.

Technical Skills

Languages: Javascript, CSS, Node.js, C++

Development Tools: React, Git, NPM, JQuery, TypeScript, SASS, Visual Studio Code, Anime.js, Bootstrap

OS: Windows, Linux(Ubuntu)

Design/Wireframing: Figma, Adobe XD, Photoshop, Premiere Pro

Education

Glendale Community College / No degree

August 2018 - December 2021, Glendale, CA

Attended for a few years and decided to pursue self-taught Web Development because my school didn't offer it as a major. I was studying Computer Science prior to leaving the school, so my classes correlated with what I'm learning now. During those classes I learned C++ and Java.

Sotomayor High School / Diploma

Graduated with a 3.2 GPA, took an afternoon class using html and css, which ultimately sparked my interest in Web Development.

Work History

Starbucks / Barista

July 2019 - PRESENT, Los Angeles, CA

Started working here in high school, learned a lot about working in a team, communicating, people skills, de-escalating, organization, and working in a fast paced environment.

Recent Projects

Some recent coding projects i worked on were my personal portfolio and a website for a flower shop. My personal portfolio is located at <https://jerryv45.github.io/JV-portfolio/>

And my last project, the flower shop website, can be found at <https://annysflowersla.com/>

What I learned from the personal portfolio was dealing with node packages and importing everything I needed in order for the code to work. I enjoyed working on this one because it's purely Front End focused, so I could see my work coming to life as I did it.

The flower shop site required me to finish it in just a few days, so having to work under pressure and with a deadline had me more motivated and focused than on the portfolio one. What I learned from that one was making sure that everything looked equally appealing on mobile/tablet as well as desktop.

Looking at the statistics for the site now, I can see that it's true when people say that most web traffic comes from mobile, so a mobile-first approach when working on projects is definitely going to be a priority on my next project.

Speaking of, my next project is probably going to be a vue app. I played around with react for a bit but I'm interested in what vue has to offer.
